AgriLedger is a mobile app that records transaction truths using blockchain technology (a public ledger of all Bitcoin transactions that have ever been executed). It is a complete framework of integrated services for delivering an even playing field to farmers and co-ops. This solid framework of trust allows everyone to know they are working, buying, selling, and sharing goods according to a cryptographic 'Book of Truth' that is utterly incorruptible.

AgriLedger streamlines co-operative operations by putting a simple distributed Cryptoledger mobile app into the hand of every small farmer, and all transactions are permanently recorded on an incorruptible Blockchain ledger.
