- Environment & Sustainability
- Internet
- Mobile

Bucky Box builds software to help food distributors deal directly with customers, in a mission to create a better food system. Its cloud software aims to solve the food distribution problem in ways that nurture earth-friendly farming and resilience. It's a social enterprise on a mission to foster a human food system that is supportive of the long-term health of all living systems. A minimum of 67% of profits is reinvested into projects that further the company's mission.
