- Social Software

OrphanGift is a charity that helps marginalised children with gifts for schools and orphanages.

They currently have an educational pilot programme at a Nepali boarding home for orphans and marginalised children.

With the Gift of Learning they aim to improve three things: access to information, quality of education, and computer literacy. Using [Raspberry Pi](#) and an offline server solution, the programme provides access to thousands of books, videos and top e-learning software, as well as [Scratch](#) to teach programming.
