- Education
- Physical Computing

Magic Planet makes global concepts much easier for students to understand and appreciate. It combines the power of 3D multimedia visualisation, the world's largest library of global content and a user interface designed and tested for teachers and students alike. It's a scalable, proven platform that grabs the attention and taps the learning strengths of each student in the classroom. It's been proven to increase comprehension by 16% across a wide variety of subjects, including world history, earth and space science, global culture, government, geography and more.
