

YBRAIN

TACKLING ALZHEIMER'S DISEASE WITH WEARABLE TECH

Project URL: ybrain.com/?ckattempt=1

- Health
- Physical Computing

Ybrain has developed a headband wearable that features two sensors that touch the forehead, sending electrical signals to specific parts of the brain that help reduce symptoms of a neuro-degenerative disease.

It can also be used to help stimulate brain activity in healthy wearers. You can use it for 30 minutes per day for results.

They are currently carrying out clinical trials with the Samsung Medical Centre in Seoul. The technology was the winner of the Tech in Asia Tour in Seoul in 2014.
